

To access the TraumaHQ UAT (User Acceptance Testing) platform:

1. Open a web browser.
2. Enter the URL: <https://patrauma-uat1.irp.iqvia.com/login> to navigate to the UAT sign-in page.
3. Enter username and temporary Password as provided in IQVIA email.

4. Upon log-in, the system will redirect the user to change the password. Re-enter the temporary password and then type a new password (twice). New passwords must meet the criteria as defined on the screen.
5. After successfully changing the password, during this first log-in only, the user must accept the PTSF Data Use and License Agreement statement.

*“By clicking Accept, I acknowledge that I work at an accredited trauma center or a hospital pursuing accreditation, or in a consultant or Foundation role with the accredited trauma center or hospital pursuing accreditation, which PTSF has granted a right to access and use the Pennsylvania Trauma System Foundation trauma applications, and such accredited trauma center or hospital pursuing accreditation has authorized me to access and use the applications on its behalf.”*

6. After accepting the agreement, during this first log-in only, the software will prompt you to set up challenge questions. Challenge questions are security questions and answers that are used for self-service password recovery. By setting up these questions, users will be enabled to input an answer that will help verify their identity and allows them to reset their password. The user will have the option to skip this step; however, the prompt will appear with each log-in until it is completed.
